

Using the RS232-USB-Converter-cable

USB-Treiber

The KB-RS232-USB is an universal converter cable for RS232 devices (9pin sub D) to USB, e.g. mobile combi devices HFM/HFU.

To prepare the usage please connect the cable to the PC first, then select the correct driver depending on the installed operating system. For operating systems Microsoft Windows XP and Windows Vista drivers are available.[file name PL2303...Setup.exe start via double click]

After the installation the cable converter is ready for use. The new device is also shown in Windows device manahger under COM and LPT Ports.

Keyboard -Emulation

If the connected device should be used with keyboard emulation via USB a separte emulating software must be installed on the PC..
